

Platform Philosophy: Decision Support System — not a Decision Making System. The platform detects, analyzes, and recommends. Final decisions on penalties, fault verification, and closure remain with authorized GVMC officials at every step.

Role-Based Dashboards

- ✓ **Production-Tested — Not Just Demonstrated**
- Real fault detection from live telemetry values

Automatic contractor assignment by zone

Database-enforced 48-hour SLA deadline

Hourly sweep catches silently missed breaches

Role-based data isolation between contractors

Field engineer status-change restrictions enforced

Duplicate-fault suppression on repeat readings

Full audit trail on every login and data change

CORE CAPABILITIES

- ✓ Live zone map with fault markers & glow-rate overlay
- ✓ 5-layer Component Inspector per pole (location, electrical, ticket, history, smart-city port)
- ✓ Monthly glow-rate tracking with 95% minimum / 97% target threshold alerts
- ✓ Dual penalty formula — energy-loss basis vs. demurrage, higher applies
- ✓ One-click Excel export & auto-generated monthly PDF-style report
- ✓ Mobile-responsive field engineer app for on-ground crews
- ✓ 30-minute session timeout, brute-force login protection

ROLE-BASED ACCESS

Role	Sees
Super Admin	Everything + user management
Commissioner	City-wide, all zones, reports
Executive Engineer	Their zone only
Contractor	Own work orders & billing only
Field Engineer	Assigned jobs, mobile-first
Read Only / Audit	View only, no exports

Note on this demo: The dashboards you'll see today are populated with consistent illustrative data, since no real pole inventory or CCMS telemetry has been connected yet. The backend workflow behind those screens — fault detection, work-order creation, SLA enforcement, contractor assignment — has been independently tested against the live production database and works correctly end to end. Once GVMC's actual pole register and CCMS data are available, the same tested pipeline picks it up with no redesign required.
